

office of environmental services Water Discharge Permit

FINAL

GENERAL PERMIT NUMBER LAG560000 Agency Interest Number 89741

Class III Sanitary Discharge General Permit

In accordance with the Clean Water Act of 1987 and the Louisiana Environmental Quality Act (La. R.S. 30:2001, et seq.: "The Act") and the Rules effective or promulgated under the authority of the Act, this Louisiana Pollutant Discharge Elimination System General Permit is issued. This permit authorizes persons who meet the requirements of Part I.A and have been approved by the Office to discharge to waters of the State treated sanitary wastewater and/or other accepted wastewater types totaling less than 50,000 gallons per day maximum expected flow in accordance with effluent limitations, monitoring requirements, and other conditions set forth in Parts I, II, and III of this permit.

This permit becomes effective August 1, 2003.

This permit expires <u>five (5) years from the effective date of the permit.</u>

Issued this 11th day of July, 2003.

Original Signed by Linda Korn Levy
Linda Korn Levy
Assistant Secretary

SECTION A. APPLICABILITY

Facilities covered by this general permit are those discharging treated sanitary wastewater and/or other accepted wastewater types in quantities less than 50,000 GPD maximum expected flow as calculated using the sewage loading guidelines in the state sanitary code or from an alternative approved data source and which are required to meet a secondary level of treatment. "Accepted wastewater types" include those wastewaters with effluent characteristics which are not significantly different from sanitary wastewaters and which may be successfully treated by biological means to meet effluent limitations. Facilities covered include, but are not limited to, residential subdivisions, trailer parks, on-site residential laundry facilities, coin operated laundromats, restaurants, schools, shopping centers, and office buildings.

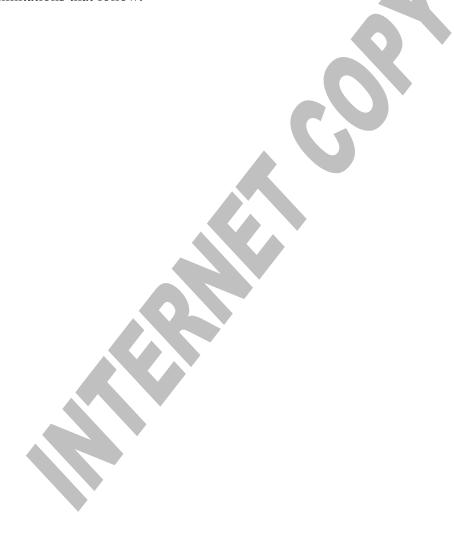

All persons operating a source or conducting an activity that results in a treated sanitary wastewater discharge as described above are eligible for coverage under this general permit and will become permittees authorized to discharge upon written notification by this Office of coverage under this general permit. Notice of intent (NOI) to be covered under this general permit should be made using form WPS-G which obtained bv calling (225)765-0036 on Internet http://www.deq.state.la.us/permits/lpdes/index.htm. Existing dischargers eligible for this permit must submit a NOI within thirty (30) days of the effective date of this permit. Proposed facilities desiring coverage under this permit must submit a NOI at least thirty (30) days prior to commencement of discharge. Any permittee covered by an individual permit may request that the individual permit be canceled if the permitted source or activity is also eligible for coverage by this general permit. Upon written acceptance of that request by this Office, the permittee will be covered by this general permit.

This general permit shall not apply to:

- 1. discharges other than those described above;
- 2. facilities which do not conform with the regulations set forth in the Louisiana Sanitary Code;
- 3. facilities which receive unacceptable wastewater types from industrial and/or other sources; and
- 4. facilities which have been assigned limitations in the Louisiana Water Quality Management Plan or an approved Waste Load Allocation (from a previous study or from the current updates from the Total Maximum Daily Loads) that are different from those in this permit.
- 5. sanitary discharges at operations classed as new sources or new dischargers, if the discharge will cause or contribute to the violation of water quality standards (LAC 33:IX.2317.A.9).

SECTION B. EFFLUENT LIMITATIONS

During the period beginning with the written notification of coverage under this permit and lasting through the expiration date of this general permit, all permittees covered under this general permit are authorized to discharge treated sanitary wastewater and/or other accepted wastewater totaling less than 50,000 gallons per day maximum expected flow from the specified facility in accordance with the conditions and limitations that follow.

SCHEDULE A: EFFLUENT LIMITATIONS FOR ALL DISCHARGES OF TREATED SANITARY WASTEWATER (less than 50,000 GPD)

During the period beginning with the <u>written notification of coverage under this permit</u> and lasting through the expiration date of this general permit, all permittees covered under this general permit are authorized to discharge treated sanitary wastewater and/or other accepted wastewater totaling less than 50,000 gallons per day maximum expected flow from Outfall 001 (If there is more than one outfall, the permittee should **refer to Appendix A** to determine the outfall number assigned to each discharge. Appendix A also indicates the effluent limitation page(s) that applies to each outfall.) in accordance with the following limitations:

EFFLUENT CHARACTERISTICS	DISCHARGE LIMITATIONS		MONITORING REQUIREMENTS	
EACH OUTFALL	MONTHLY AVERAGE	WEEKLY AVERAGE	MEASUREMENT FREQUENCY	SAMPLE TYPE
FLOW – gpd	N/A	REPORT	1 / month	Measure
BOD ₅ / CBOD ₅ ¹ mg/L	20	30	1 / month	Grab
TSS mg/L	20	30	1 / month	Grab
OIL & GREASE ² mg/L	N/A	15	1 / month	Grab
FECAL COLIFORM ^{3&4} COLONIES/100 ml	200	400	1 / month	Grab
pH - Allowable Range (Standard Units)	6.0 (Minimum)	9.0 (Maximum)	1 / month	Grab

¹CBOD₅ limitations are required when NH₃-N limitations are placed in the permit. BOD₅ limitations are required when NH₃-N limitations are not placed in the permit.

There shall be no discharge of floating solids or visible foam in other than trace amounts, nor of free oil or other oily materials, nor of toxic materials in quantities such as to cause acute toxicity to aquatic organisms. Furthermore, there shall be no visible sheen or stains attributable to this discharge.

² Required only for discharges which include food service waste.

³ If chlorination is chosen as a disinfection method, see Part II, Section H.

⁴ If this discharge is located in an oyster propagation area, fecal coliform limitations will be 14 colonies/100 ml monthly average and 43 colonies/100 ml weekly average. Instructions will be given in the cover letter of this permit if these more stringent fecal coliform limitations are required.

INTERIM SCHEDULE A: EFFLUENT LIMITATIONS FOR ALL DISCHARGES OF TREATED SANITARY WASTEWATER (less than 50,000 GPD)

During the period beginning with the <u>written notification of authorization of this interim schedule</u> and ending no later than <u>three years from the date of said notification</u> (see Part II, Section J), permittees covered under this general permit are authorized to discharge treated sanitary wastewater and/or other accepted wastewater types totaling less than 50,000 gallons per day maximum expected flow from Outfall 001 (If there is more than one outfall, the permittee should **refer to Appendix A** to determine the outfall number assigned to each discharge. Appendix A also indicates the effluent limitation page(s) that applies to each outfall.) in accordance with the following limitations and monitoring requirements:

EFFLUENT CHARACTERISTICS	DISCHARGE LIMITATIONS		MONITORING REQUIREMENTS	
EACH OUTFALL	MONTHLY AVERAGE	WEEKLY AVERAGE	MEASUREMENT FREQUENCY	SAMPLE TYPE
FLOW – gpd	N/A	REPORT	1 / month	Measure
BOD ₅ / CBOD ₅ ¹ mg/L	30	45	1 / month	Grab
TSS ² mg/L	30	45	1 / month	Grab
OIL & GREASE ³ mg/L	N/A	15	1 / month	Grab
FECAL COLIFORM ^{4&5} COLONIES/100 ml	200	400	1 / month	Grab
pH - Allowable Range (Standard Units)	6.0 (Minimum)	9.0 (Maximum)	1 / month	Grab

¹CBOD₅ limitations are required when NH₃-N limitations are placed in the permit. BOD₅ limitations are required when NH₃-N limitations are not placed in the permit.

There shall be no discharge of floating solids or visible foam in other than trace amounts, nor of free oil or other oily materials, nor of toxic materials in quantities such as to cause acute toxicity to aquatic organisms. Furthermore, there shall be no visible sheen or stains attributable to this discharge.

²If the treatment unit is an oxidation pond, the monthly average limitation shall be 90 mg/L and the weekly average limitation shall be 135 mg/L.

³ Required only for discharges which include food service waste.

⁴ If chlorination is chosen as a disinfection method, see Part II, Section H.

⁵ If this discharge is located in an oyster propagation area, fecal coliform limitations will be 14 colonies/100 ml monthly average and 43 colonies/100 ml weekly average. Instructions will be given in the cover letter of this permit if these more stringent fecal coliform limitations are required.

SCHEDULE B:

EFFLUENT LIMITATIONS FOR DISCHARGERS OF TREATED SANITARY WASTEWATER (less than 50,000 GPD) WHICH WILL REQUIRE (5/10) NH₃-N LIMITATIONS DUE TO A FINALIZED TMDL OR, ON A CASE-BY-CASE BASIS, TO ADDRESS A 303(d) IMPAIRMENT

During the period beginning with the <u>written notification of coverage under this permit</u> and lasting through the expiration date of this general permit, all permittees covered under this general permit are authorized to discharge treated sanitary wastewater and/or other accepted wastewater totaling less than 50,000 gallons per day maximum expected flow from Outfall 001 (If there is more than one outfall, the permittee should **refer to Appendix A** to determine the outfall number assigned to each discharge. Appendix A also indicates the effluent limitation page(s) that applies to each outfall.) in accordance with the following limitations:

INTERIM LIMITATIONS: The following limitations shall apply from the period beginning with the written notification of authorization coverage under this general permit and ending no later than three years from the date of said authorization (See Part II, Section J).

EFFLUENT	DISCHARGE		MONITORING	
CHARACTERISTICS	LIMITATIONS		REQUIREMENTS	
EACH OUTFALL	MONTHLY	WEEKLY	MEASUREMENT	SAMPLE
	AVERAGE	AVERAGE	FREQUENCY	TYPE
NH ₃ -N mg/L	Report	Report	1 / month	Grab

EFFLUENT CHARACTERISTICS	DISCH LIMITA			
EACH OUTFALL	MONTHLY AVERAGE	WEEKLY AVERAGE	MEASUREMENT FREQUENCY	SAMPLE TYPE
NH ₃ -N mg/L	5	10	1 / month	Grab

SCHEDULE C: EFFLUENT LIMITATIONS FOR DISCHARGERS OF TREATED SANITARY WASTEWATER (less than 50,000 GPD) WHICH WILL REQUIRE (4/8) NH₃-N LIMITATIONS DUE TO A FINALIZED TMDL OR, ON A CASE-BY-CASE BASIS, TO ADDRESS A 303(d) IMPAIRMENT

During the period beginning with the <u>written notification of coverage under this permit</u> and lasting through the expiration date of this general permit, all permittees covered under this general permit are authorized to discharge treated sanitary wastewater and/or other accepted wastewater totaling less than 50,000 gallons per day maximum expected flow from Outfall 001 (If there is more than one outfall, the permittee should **refer to Appendix A** to determine the outfall number assigned to each discharge. Appendix A also indicates the effluent limitation page(s) that applies to each outfall.) in accordance with the following limitations:

INTERIM LIMITATIONS: The following limitations shall apply from the period beginning with the written notification of authorization coverage under this general permit and ending no later than three years from the date of said authorization (See Part II, Section J).

EFFLUENT	DISCHARGE		MONITORING	
CHARACTERISTICS	LIMITATIONS		REQUIREMENTS

CHARACTERISTICS	LIMITA		REQUIREMENTS	
EACH OUTFALL	MONTHLY	WEEKLY	MEASUREMENT	SAMPLE
	AVERAGE	AVERAGE	FREQUENCY	TYPE
NH ₃ -N mg/L	4	8	1 / month	Grab

SCHEDULE D:

EFFLUENT LIMITATIONS FOR DISCHARGERS OF TREATED SANITARY WASTEWATER (less than 50,000 GPD) WHICH WILL REQUIRE SEASONAL (SUMMER 5/10; WINTER 10/20) NH₃-N LIMITATIONS DUE TO A FINALIZED TMDL OR, ON A CASE-BY-CASE BASIS, TO ADDRESS A 303(d) IMPAIRMENT

During the period beginning with the <u>written notification of coverage under this permit</u> and lasting through the expiration date of this general permit, all permittees covered under this general permit are authorized to discharge treated sanitary wastewater and/or other accepted wastewater totaling less than 50,000 gallons per day maximum expected flow from Outfall 001 (If there is more than one outfall, the permittee should **refer to Appendix A** to determine the outfall number assigned to each discharge. Appendix A also indicates the effluent limitation page(s) that applies to each outfall.) in accordance with the following limitations:

INTERIM LIMITATIONS: The following limitations shall apply from the period beginning with the written notification of authorization coverage under this general permit and ending no later than three years from the date of said authorization (See Part II, Section J).

EFFLUENT	DISCHARGE		MONITORING	
CHARACTERISTICS	LIMITATIONS		REQUIREMENTS

March – November	5	10	1 / month	Grab
December - February	10	20		

PART I Page 8 of 12 LAG560000 AI 89741

SCHEDULE E: EFFLUENT LIMITATIONS FOR DISCHARGERS OF TREATED SANITARY WASTEWATER (less than 50,000 GPD) WHICH REQUIRE DISSOLVED OXYGEN LIMITATIONS DUE TO A FINALIZED TMDL OR, ON A CASE-BY-CASE BASIS, TO ADDRESS A 303(d) IMPAIRMENT

During the period beginning with the <u>written notification of coverage under this permit</u> and lasting through the expiration date of this general permit, all permittees covered under this general permit are authorized to discharge treated sanitary wastewater and/or other accepted wastewater totaling less than 50,000 gallons per day maximum expected flow from Outfall 001 (If there is more than one outfall, the permittee should **refer to Appendix A** to determine the outfall number assigned to each discharge. Appendix A also indicates the effluent limitation page(s) that applies to each outfall.) in accordance with the following limitations:

INTERIM LIMITATIONS: The following limitations shall apply from the period beginning with the written notification of authorization coverage under this general permit and ending no later than three years from the date of said authorization (See Part II, Section J).

EFFLUENT CHARACTERISTICS	DISCHARGE	MONITOR	ING _

PART II

OTHER REQUIREMENTS

The Permittee must comply with all applicable provisions of the Louisiana Water Quality Regulations including all of the standard conditions found in LAC 33:IX.2355. This Office has established the following definitions and requirements in accordance with those regulations. The definition of other terms may be found in the Louisiana Water Quality Regulations (LAC 33:IX.2313).

SECTION A. DEFINITIONS

- 1. <u>Act</u>: means Act 449 of the 1979 Louisiana Legislature which established Section 2001, <u>et seq</u>. of Title 30 of the Louisiana Revised Statutes of 1950 and any subsequent amendment to these Sections.
- 2. <u>Biochemical oxygen demand (BOD₅)</u>: means the amount of oxygen required by bacteria during the decay of organic and nitrogenous material in sanitary sewage.
- 3. <u>Daily Discharge</u>: means the discharge of a pollutant measured during a calendar day or any 24-hour period that reasonably represents the calendar day for purposes of sampling. For pollutants with limitations expressed in terms of mass, the "daily discharge" is calculated as the total mass of the pollutant discharged over the sampling day. For pollutants with limitations expressed in other units of measurements, the "daily discharge" is calculated as the average measurement of the pollutant over the sampling day. "Daily discharge" determination of concentration made using a composite sample shall be the concentration of the composite sample. When grab samples are used, the "daily discharge" determination of concentration shall be the arithmetic average (weighted by flow value) of all samples collected during that sampling day.
- 4. <u>Daily Maximum</u>: discharge limitation means the highest allowable "daily discharge" during the calendar month.
- 5. <u>Monthly Average</u>: other than for fecal coliform bacteria, is the highest allowable arithmetic mean of the "daily discharges" over a calendar month, calculated as the sum of all "daily discharges" measured during a calendar month divided by the number of "daily discharges" measured during that month. The monthly average for fecal coliform bacteria is the geometric mean of the "daily discharges" over a calendar month.
- 6. <u>Weekly Average</u>: other than for fecal coliform bacteria, is the highest allowable arithmetic mean of the "daily discharges" over a calendar week, calculated as the sum of all "daily discharges" measured during a calendar week divided by the number of "daily discharges" measured during that week. The weekly average for fecal coliform bacteria is the geometric mean of the "daily discharges" over a calendar week.
- 7. <u>Facility</u>: means a pollution source, or any public or private property or site and all contiguous land and structures, other appurtenances and improvements, where any activity is conducted which discharges or may result in the discharge of pollutants into waters of the State.
- 8. *Fecal coliform*: means a gram negative, non-spore forming, rod-shaped bacteria found in the intestinal tract of warm-blooded animals.

- 9. <u>Maximum Expected Flow</u>: means the rate of wastewater flow expected upon the completion of the planned facility or activity.
- 10. <u>mg/L</u>: means milligrams per liter; it is essentially equivalent to parts per million in dilute aqueous solutions.
- 11. <u>Office</u>: means the Office of Environmental Services within the Department of Environmental Quality.
- 12. <u>Sanitary wastewater</u>: means treated or untreated wastewaters which contain human metabolic and domestic wastes.
- 13. <u>Standard Methods</u>: means <u>Standard Methods for the Examination of Water and Wastewater</u>, American Public Health Association, Washington, DC.
- 14. <u>Total suspended solids (TSS)</u>: means the amount of solid material suspended in water commonly expressed as a concentration in terms of mg/L.
- 15. <u>Waters of the State</u>: for purposes of the Louisiana Pollutant Discharge Elimination System, this includes all surface waters which are subject to the ebb and flow of the tide, lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, natural ponds, impoundments of waters within the state of Louisiana otherwise defined as "waters of the United States" in 40 CFR 122.2 and tributaries of all such waters. "Waters of the State" does not include waste treatment systems, including treatment ponds or lagoons designed to meet the requirements of the Clean Water Act, 33 U.S.C. 1251, et seq.

SECTION B. FACILITY CHANGES

The authorization to discharge in accordance with this general permit is terminated upon an increase in the discharge rate to 50,000 gallons per day or greater maximum expected flow. Prior to any such change in the discharge rate from a treatment unit covered by this general permit, the permittee must submit notification (Form WPS-G) to this Office and receive from this Office authorization to discharge at that increased rate.

SECTION C. COVERAGE UNDER SUBSEQUENT PERMITS

Should this Office decide to reissue this general permit, permittees currently covered under it will automatically receive a copy of the reissued permit. Should this permit expire before it is reissued, this Office will administratively extend the permit to discharge until such time that a new general permit is issued. Instructions for obtaining coverage under the reissued permit will be included in that permit.

SECTION D. TERMINATION OF AUTHORIZATION TO DISCHARGE

This Office reserves the right to revoke the authorization to discharge in accordance with this general permit as it applies to any person and/or require such person to apply for and obtain an individual permit if:

- 1. the covered source or activity is a significant contributor of pollution or creates other environmental problems;
- 2. the permittee is not in compliance with the terms and conditions of this general permit;
- 3. conditions or standards have changed so that the source or activity no longer qualifies for this general permit; or
- 4. the discharge limitations contained in this permit are not in accordance with the Water Quality Management Plan.

SECTION E. COMPLIANCE SCHEDULE

The permittee shall be in compliance with the effluent limitations and monitoring requirements specified herein on the date of authorization of coverage under this general permit. If a discharge is found to be in violation of specified limits, the permittee will be subject to enforcement action, including civil penalties, and may be required to obtain an individual permit.

SECTION F. PROPERTY RIGHTS

Authorization to discharge pursuant to the conditions of this permit does not relieve the permittee of any liability for damages to state waters or private property. For discharges to private land, this permit does not relieve the permittee from obtaining approval from the landowner for appropriate easements and rights of way.

SECTION G. REMOVED SUBSTANCES

Solids, sludges, filter backwash, or other pollutants removed in the course of treatment or control of wastewaters shall be properly disposed of in compliance with applicable state laws, regulations and permit requirements and in a manner such as to prevent any pollutant from such materials from entering the waters of the State. The permittee may need to contact the Municipal and Commercial Waste Unit of the Office of Environmental Services for information on regulations and permits to dispose of this material.

PART II Page 4 of 8 LAG560000 AI 89741

The Department of Environmental Quality reserves the right to impose more stringent discharge limitations and/or additional restrictions in the future to maintain water quality integrity and the designated uses of the receiving water bodies based upon water quality studies. These studies may indicate the need for more advanced wastewater treatment. Studies of similar discharges and receiving water bodies have resulted in monthly average effluent limitations of 5 mg/L CBOD₅ and 2 mg/L NH₃-N. Therefore, prior to upgrading or expanding any permitted sewage treatment method at the facility, the permittee should contact the Department to determine the status of the work being done to establish future effluent limitations and additional permit conditions.

Future water quality studies may indicate potential toxicity from the presence of residual chlorine in the treatment facility's effluent. Therefore, the permittee is hereby advised that a future Total Residual Chlorine Limitation may be required if chlorine is used as a method of disinfection. In many cases, this becomes a NO MEASURABLE Total Residual Chlorine Limitation. If such a limitation were imposed, the permittee would be required to provide for dechlorination of the effluent prior to discharge. Please be aware, concentrations of Total Residual Chlorine above 0.01 mg/L can cause or contribute to significant toxicity in receiving streams and biomonitoring testing. It is the permittee's responsibility to assure that no Total Residual Chlorine remains in the effluent after dechlorination in order to prevent toxicity in the receiving stream.

SECTION I. OTHER DISCHARGES

This permit does not in any way authorize the permittee to discharge a pollutant not listed or quantified in the notice of intent or as otherwise authorized in the permit.

Any runoff leaving the site, other than the permitted outfalls, exceeding 50 mg/l Total Organic Carbon (TOC), 15 mg/l Oil and Grease, or having a pH less than 6.0 or greater than 9.0 standard units shall be a violation of this permit.

SECTION J. INTERIM EFFLUENT LIMITATIONS

Facilities which are unable to attain compliance with the final effluent limitations contained in Part I, Section B, Schedule A of this permit, and which have been determined by this Office to be eligible, will receive an Interim Schedule A.

The interim limitations found in the various schedules are intended to provide facilities with a reasonable amount of time in which to achieve compliance with the final effluent limitations. <u>Under no circumstances will an eligible facility be allowed more than three years from the date of authorization of coverage under this general permit to attain compliance with the final effluent limitations. Facilities currently meeting the Final Effluent Limitations contained in this permit shall be required to continue to meet the Final Effluent Limitations unless otherwise instructed by this Office.</u>

PART II Page 5 of 8 LAG560000 AI 89741

In addition to the other monitoring requirements, you are required to submit to this Office annual progress reports on the status of improvements at your facility. The first of these annual reports must be received no later than six (6) months from the original date of notification of coverage under this general permit. Subsequent reports shall be submitted at one year intervals.

In the event that this general permit expires before a given eligible facility has completed its interim period, provisions will be made upon the renewal of this general permit to allow such facilities time, not to exceed a total of three years, to achieve compliance with the final effluent limitations.

SECTION K. STATE WATER QUALITY STANDARDS

LAC 33:IX.1113 describes numerical and general criteria that apply to all discharges into waters of the State. Criteria are elements of the water quality which set limitations on the permissible amounts of a substance or other characteristics of state waters. The General Criteria, as described in the Louisiana Administrative Code, limit discharges to maintain aesthetics, color, turbidity, the biological and aquatic community integrity, and many other elements in the receiving water body. Any noncompliance with the General or Numerical Criteria is not authorized under this permit.

To comply with the requirements of LAC 33:IX.2317.A.9, proposed discharges to receiving streams which are listed on the state's 303(d) list will be evaluated, based on the extensive information which must be provided in the application form to determine their potential to cause or contribute to a violation of water quality standards. Evaluations of proposed discharge characteristics including volume, frequency, method of release, distance from receiving stream, receiving stream hydrology, plus any relevant factors, will be completed. New source or new discharge sanitary discharges determined to have potential to cause or contribute to the violation of water quality standards, not addressed by the applicable outfall schedules of this permit, may not be eligible for coverage under this general permit.

SECTION L. PERMIT REOPENER CLAUSE

This permit may be modified, revoked and reissued, or terminated for cause in accordance with LAC 33:IX.2383, 2387, and 2769. The filing of a request for a permit modification, revocation and reissuance, or termination, or a notification of planned changes or anticipated noncompliance, does not stay any permit condition. This Office reserves the right to reopen and modify this permit to conform to those standards necessary to maintain the water quality in order to support uses of the receiving water bodies. This Office reserves the right to remove a facility on a 303(d) listed stream/segment from coverage or require an application if a final TMDL requires more stringent conditions for a covered facility.

SECTION M. PERMIT CANCELLATION REQUIREMENTS

Should the permittee wish to cease the discharge activity and cancel this general permit, written notification should be forwarded to this Office. This notification must contain at a minimum the company name, facility name, general permit number, and description of the change in activities prompting the permittee's request for cancellation.

SECTION N. MONITORING AND REPORTING REQUIREMENTS

- 1. All sampling and testing shall be conducted in accordance with EPA-approved methods, such as those found in Standard Methods For the Examination of Water and Wastewater.
- 2. Samples shall be taken at the point of discharge from the treatment unit and prior to mixing with the receiving water.
- 3. Provisions must be made during the installation of the treatment unit for obtaining a proper sample.
- 4. Proper sampling techniques shall be used to ensure that analytical results are representative of pollutants in the discharge.
- 5. The permittee shall at all times properly operate and maintain the facilities used to achieve compliance with the conditions of this permit.
- 6. 24-hour Oral Reporting: Daily Maximum Limitation Violations

Under the provisions of Part III, Section D.6.e.(3) of this permit, violations of daily maximum limitations for the following pollutants shall be reported orally to the Office of Environmental Compliance within 24 hours from the time the permittee became aware of the violation followed by a written report in five days.

Pollutants: None

7. All monitoring records must be retained for a period of at least three (3) years from the date of the sample measurements. The permittee shall make available to this Office, upon request, copies of all monitoring data required by this permit.

Records of monitoring information shall include the following:

- a. date, exact place, and time of sampling or measuring;
- b. individual(s) who performed the sampling or measurements;
- c. date(s) and time(s) analysis were begun;
- d. individual(s) who performed the analyses;
- e. analytical techniques or methods used;
- f. results of such analyses; and,
- g. results of all Quality Control procedures.
- 8. Monitoring results must be reported on a Discharge Monitoring Report (DMR) form (EPA No.

PART II Page 7 of 8 LAG560000 AI 89741

3320-1 or an approved substitute). If there is a no discharge event at the monitored outfall(s) during the sampling period, write "No Discharge" in the upper right corner of the Discharge Monitoring Report.

Monitoring results obtained for each Measurement Frequency period shall be summarized on a Discharge Monitoring Report (DMR) form. If more than one sample is obtained during the prescribed Measurement Frequency period, the results are averaged and reported on the DMR. DMR General Instruction Number 5 defines "Average" as the arithmetic average (geometric average for bacterial parameters) of all sample measurements for each parameter obtained during the "Monitoring Period". Submission of DMRs shall be on a quarterly basis and in accordance with the following schedule:

Monitoring Period	DMR Due
January, February, March	April 28 th
April, May, June	July 28 th
July, August, September	October 28 th
October, November, December	January 28 th

If no samples were taken during to "Monitoring Period", then the DMR submitted on the due date for that quarter should state "No Sample Taken".

Copies of DMRs signed and certified as required by LAC 33:IX.2333.B, and all other reports required by this office shall be submitted to the Office of Environmental Compliance and the DEQ Regional Office specified on the cover letter accompanying this permit at the following addresses.

Louisiana Pollutant Discharge Elimination System (LPDES) General Permit LAG«LA»

«CompanyName»
 «FacilityName»
 «PhysicalLocation»
 «Facility_City», LA
Telephone Number: «ContactPhone»

In accordance with **Part I, Section C**, monitoring results shall be reported on a Discharge Monitoring Report (DMR) per the schedule specified. A DMR form must be completed for each wastewater discharge point (outfall) listed below. Instructions are provided on the back of the DMR form.

When completing a DMR form, the permittee shall place the discharge number of the corresponding wastewater discharge point in the "Discharge Number" box. The following is a list of the wastewater discharge point(s) from your facility with the assigned discharge number, discharge location, and the final effluent limitations and monitoring requirements:

Discharge Number	Discharge Location	Discharge Description	Final Effluent Limitations and Monitoring Requirements

ENDNOTES:

- [1] Designated Naturally Dystrophic Waters Segment; Seasonal DO Criteria: 5.0 mg/L November April, 3.5 mg/L May October.
- [2] Designated Intermittent Stream; Seasonal DO Criteria: 5.0 mg/L November April, 2.0 mg/L May October; Seasonal Water Uses: All uses November April, No uses May October.
- [3] Designated Naturally Dystrophic Waters Segment; Seasonal DO Criteria: 5.0 mg/L December February, 3.0 mg/L March November.
- [4] Designated Man-made Water body; Seasonal DO Criteria: 4.0 mg/L November March, 2.5 mg/L April October; Subcategory Fish and Wildlife Use, Blue Crab Use.
- [5] Designated Naturally Dystrophic Waters Segment Not Available (N/A); the following criteria are applicable:
 - (a) No more than 20% decrease in naturally occurring litter fall or stem growth;
 - (b) No significant decrease in the dominance index or stem density of bald cypress;
 - (c) No significant decrease in faunal species diversity and no more than a 20% decrease in biomass.
- [6] Site-specific Seasonal DO Criteria: 5 mg/L January April, 3.5 mg/L May December.
- [7] Designated Man-made Water body; Cl, SO₄, and TDS levels will not cause acute toxicity to the limited wildlife and aquatic life community established in the designated Monte Sano Bayou subsegment. Aquatic Life Acute Criteria will apply and Human Health Criteria will be calculated with Secondary Contact Recreation Criteria and 6.5 g/day fish consumption rate.
- [8] The temperature differential limit of 2.8°C is not applicable to this water body subsegment.
- [9] Site-specific DO Criteria.
- [10] Scenic River Segment limited to: Junction with Whiskey Chitto Creek to confluence with Marsh Bayou.
- [11] Scenic River Segment limited to: Confluence with Marsh Bayou to Ward 8 Park in Calcasieu Parish above Moss Bluff.
- [12] Scenic River Segment limited to: Confluence of East and West Prong to LA Hwy. 437, north of Covington.
- [13] Site-specific Seasonal DO Criteria: 3mg/L November-April, 2 mg/L May-October.
- [14] Site-specific Seasonal DO Criteria: 5mg/L November-April, 3mg/L May-October.
- [15] Site-specific Seasonal DO Criteria: 3 mg/l June and July, 4.5 mg/l August, 5 mg/l September through May. These seasonal

criteria may be unattainable during or following naturally occurring high flow (when the gage at the Felsenthal Dam exceeds 65 feet and also for the two weeks following the recession of flood waters below 65 feet), which may occur from May through August. Naturally occurring conditions that fail to meet criteria should not be interpreted as violations of the criteria.

[16] Designated Naturally Dystrophic Waters Segment; Seasonal DO Criteria: 5 mg/l December – February, 3 mg/l March – November.

[17] Designated Naturally Dystrophic Waters Segment. The following criteria are applicable:

- (a) No more than 50% reduction in the wetlands faunal assemblage (total abundance, total abundance of dominant species, or the species richness of fish and macroinvertebrates, minimum of five replicate samples per site; p = 0.05.
- (b) No more than 20% reduction in the total above-ground wetland productivity as measured by tree, shrub, and/or marsh grass productivity.

[18] Designated Naturally Dystrophic Waters Segment. The following criteria are applicable:

- (a) No more than 20% decrease in naturally occurring litter fall or stem growth;
- (b) No significant decrease in the dominance index or stem density of bald cypress;
- (c) No significant decrease in faunal species diversity and no more than a 20% decrease in abundance.

[19] Designated Naturally Dystrophic Waters Segment; Seasonal DO Criteria: 5 mg/l November – March, 3.5 mg/l April – October.

- [20] Designated Naturally Dystrophic Waters Segment; Seasonal DO Criteria: 5 mg/l October June, 3 mg/l July September.
- [21] Designated Naturally Dystrophic Waters Segment; Seasonal DO Criteria: 5 mg/l October June, 2.5 mg/l July September.

AUTHORITY NOTE: Promulgated in accordance with R.S. 30:2074(B)(1).

HISTORICAL NOTE: Promulgated by the Department of Environmental Quality, Office of Water Resources, LR 15:738 (September 1989), amended LR 17:264 (March 1991), LR 20:431 (April 1994), LR 20:883 (August 1994), LR 21:683 (July 1995), LR 22:1123 (November 1996), LR 24:1926 (October 1998), amended by the Office of Environmental Assessment, Environmental Planning Division LR 25:2401 (December 1999), LR 27:289 (March 2001), LR 28:462 (March 2002).

APPENDIX C

LAG560000

Turbidity limitations will be required only if they are established in a finalized TMDL or other wasteload allocation, and this TMDL or wasteload allocation establishes the limitation at the standard found in LAC 33:IX.113.B.9.i-vi.

As per LAC 33:IX.1113.B.9.i-vi, turbidity shall be limited as shown in the following table. Maximum turbidity levels are expressed as nephelometric turbidity units, or NTUs.

Discharges must be *directly* into one of the below named waterbodies in order for the effluent limitation to apply.

Waterbody	Turbidity Limit (NTU)		
Red, Mermentau, Atchafalaya, Mississippi, and Vermilion Rivers	150 NTU		
estuarine lakes, bays, bayous, and canals ¹	50 NTU		
Amite, Pearl, Ouachita, Sabine, Calcasieu, Tangipahoa, Tickfaw, and Tchefuncta Rivers	50 NTU		
freshwater lakes, reservoirs, and oxbows ²	25 NTU		
designated scenic streams and outstanding natural resource waters not previously	25 NTU		
mentioned ³			
other state waters	background plus 10% ⁴		

- LAC 33:IX.1121.B.3.b.iii.(d) refers to marine as water bodies with salinities equal or greater than two parts per thousand. The same principle applies here.
- LAC 33:IX.1121.B.3.b.iii.(a) refers to freshwater as water bodies with salinities less than two parts per thousand. The same principle applies here.
- Outstanding natural resource waters include water bodies designated for preservation, protection, reclamation, or enhancement of wilderness, aesthetic qualities, and ecological regimes, such as those designated under the Louisiana Natural and Scenic Rivers System or those designated by the office as waters of ecological significance. This use designation applies only to the water bodies specifically identified in Table 3 (LAC 33:IX.1123) and not to their tributaries or distributaries unless so specified.
- Background refers to the average presence in the environment, originally referring to naturally occurring phenomena. The ambient instream concentration for a pollutant. (EPA, 1989) The permittee shall analyze at least three upstream samples for turbidity. The arithmetic average of these samples equals the background turbidity, or B. The calculation for finding 10% of the background turbidity is shown below:

$$B \times 0.1 = X$$

10% of the background turbidity is denoted by X. Turbidity limit = B + X.

Example: Todd's treatment plant discharges into LDEQ Bayou. LDEQ Bayou's characteristics require the Turbidity limit to be the background turbidity plus 10%. The background turbidity for LDEQ Bayou is 15 NTU. The following calculations figure the turbidity limit for Todd's treatment plant:

15 NTU x 0.1 = 1.5 NTU

15 NTU + 1.5 NTU = 16.5 NTU
